

Von Meyenburg complex

- Multiple Bile duct hamartoma, is a benign tumor composed of disorganized bile ducts and ductules and fibrocollagenous stroma.
- Although bile duct hamartoma is benign, there have been reports of an association of cholangiocarcinoma with multiple bile duct hamartomas.
- Bile duct hamartoma has a nonspecific imaging appearance and can simulate metastases or microabscesses.
- On MRI will be cyst like but show peripheral enhancement.
 - If patient has a known mucinous primary (ovarian, colon etc.) Met can have appearance of hamartoma
