

Hip Abductors

- Gluteus Medius (major abductor)
- Gluteus Minimum
- Tensor Fascia Latae
- Sartorius

Gluteus medius and minimus

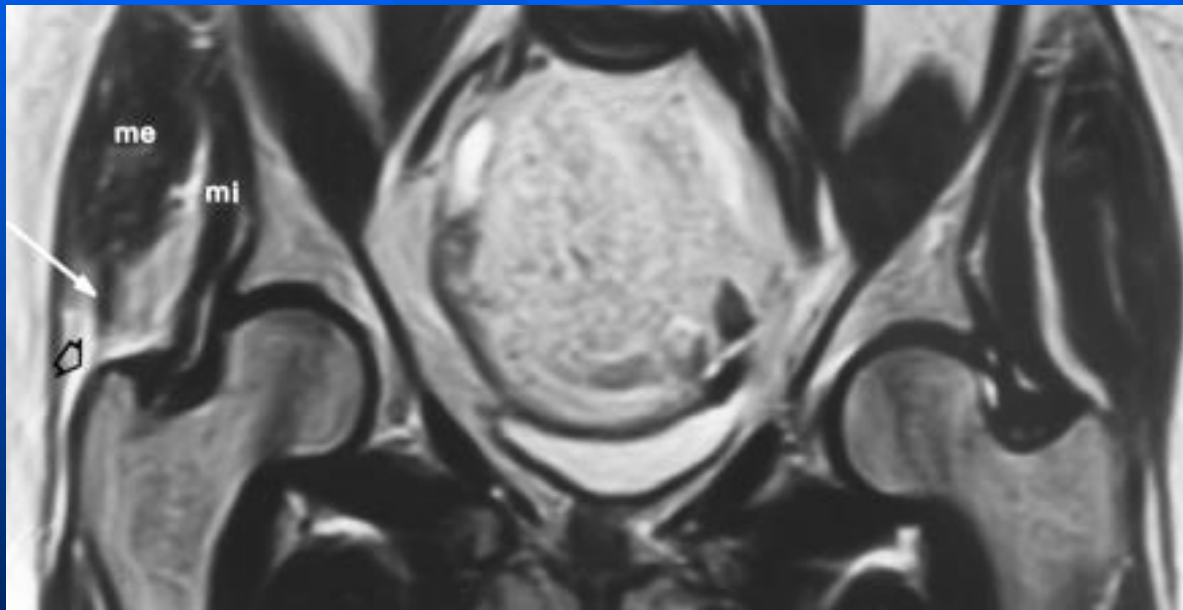

Abductor tendon cuff tear

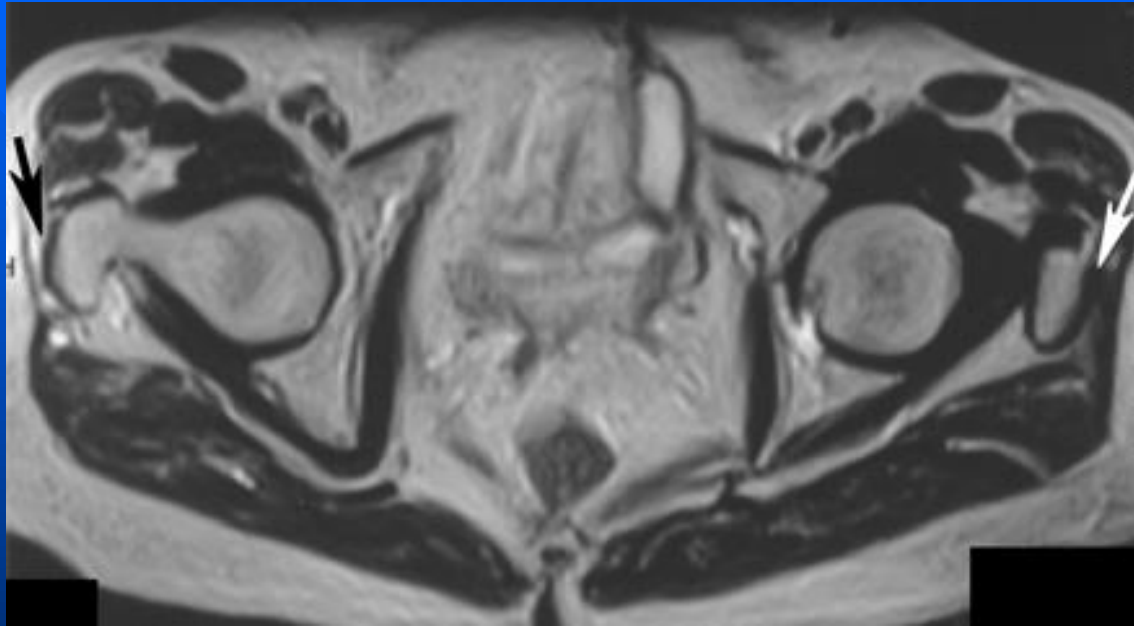

Proven focal full-thickness tear of
abductor tendon cuff

Gluteus Medius Tendon Tear

discontinuous right gluteus medius
tendon (*solid arrow*)

Focal full-thickness tear in right abductor tendon cuff

Trochanteric (subgluteus maximus) bursitis, with fluid or synovitis replacing distal right gluteus medius tendon (*black arrow*). Compare with intact appearance of left distal gluteus medius tendon (*white arrow*).

Right gluteus minimus tendon tear

Fluid or synovitis replacing distal right gluteus minimus tendon (*open arrowhead*). Compare with intact insertion of left gluteus minimus tendon (*solid arrowhead*).
