

Neurosarcoidosis

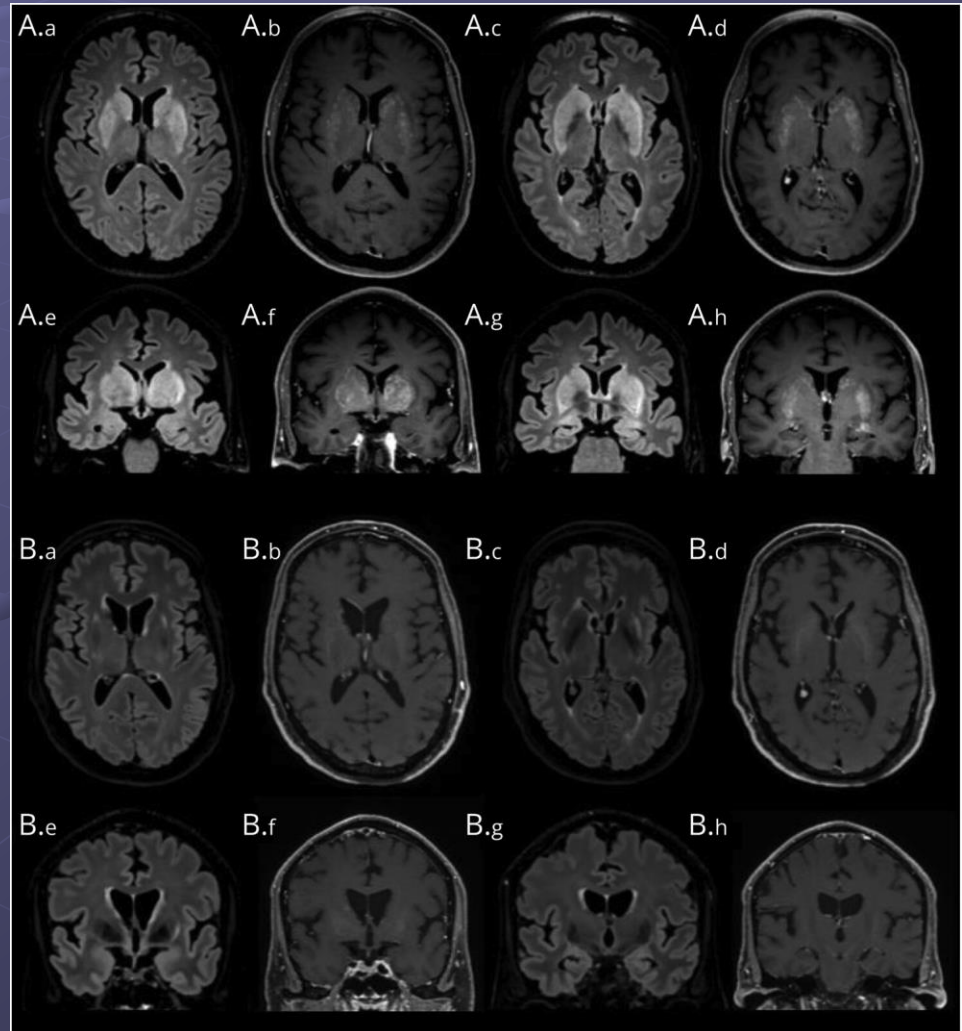

- Linear radial periventricular enhancement pattern on MRI brain is a hallmark of
- Autoimmune glial fibrillary acid protein (GFAP) astrocytopathy
- DDx:
 - Neurosarcoidosis
 - Intravascular lymphoma
 - CNS vasculitis

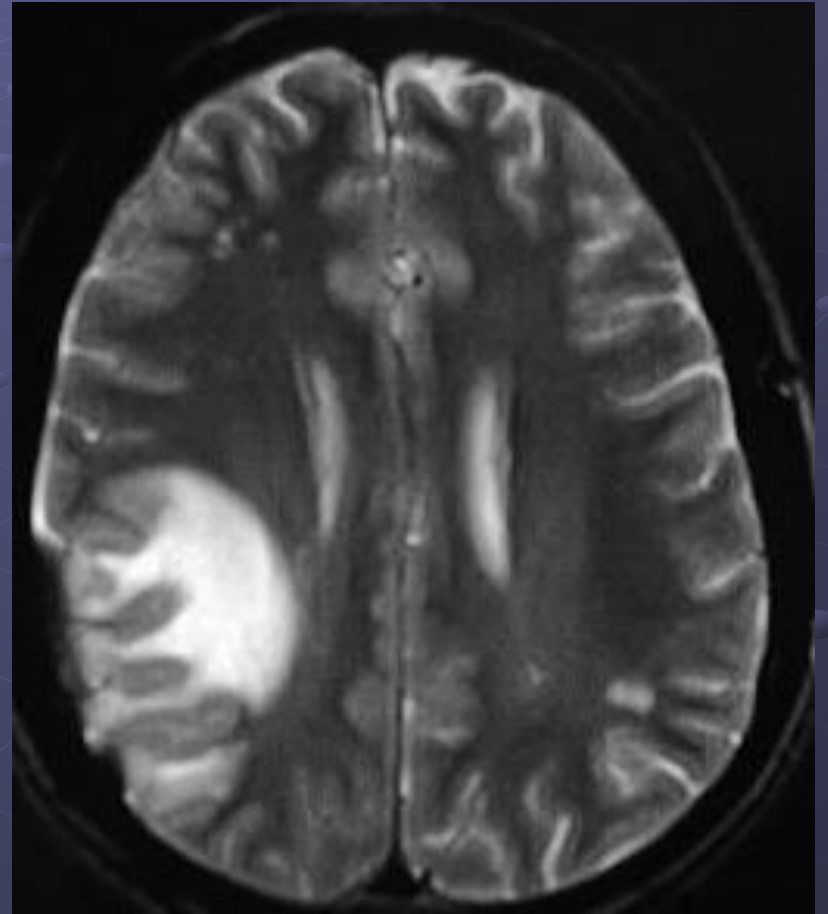

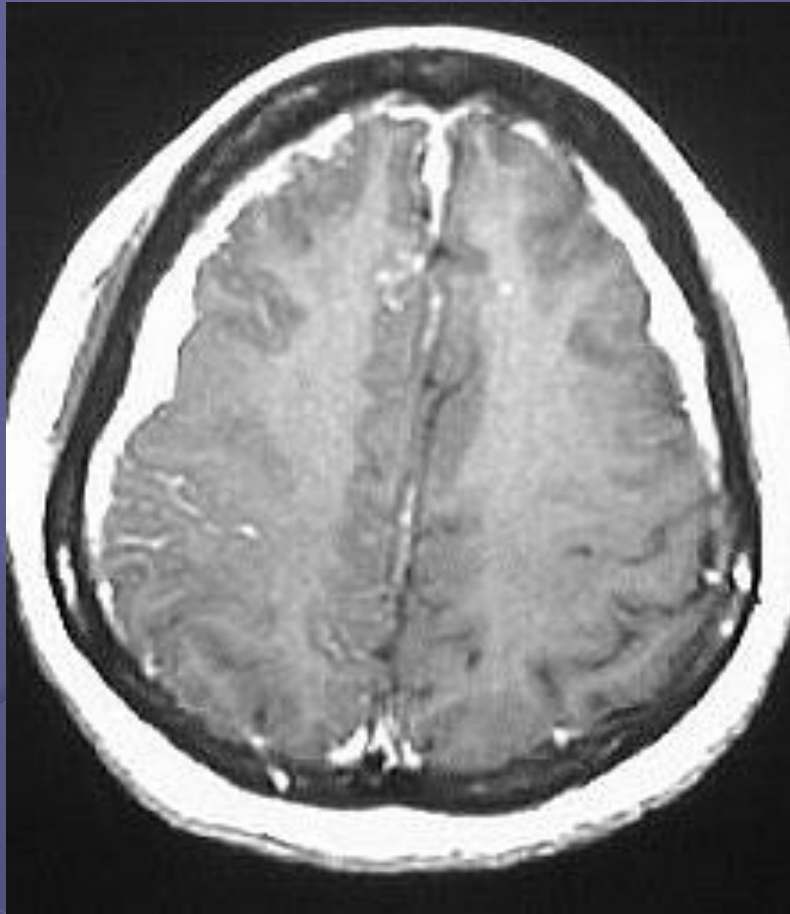

Perivascular Tumefactive Neurosarcoidosis of the Basal Ganglia

Intraparenchymal Neurosarcoidosis is often perivascular and may have a tumefactive appearance.

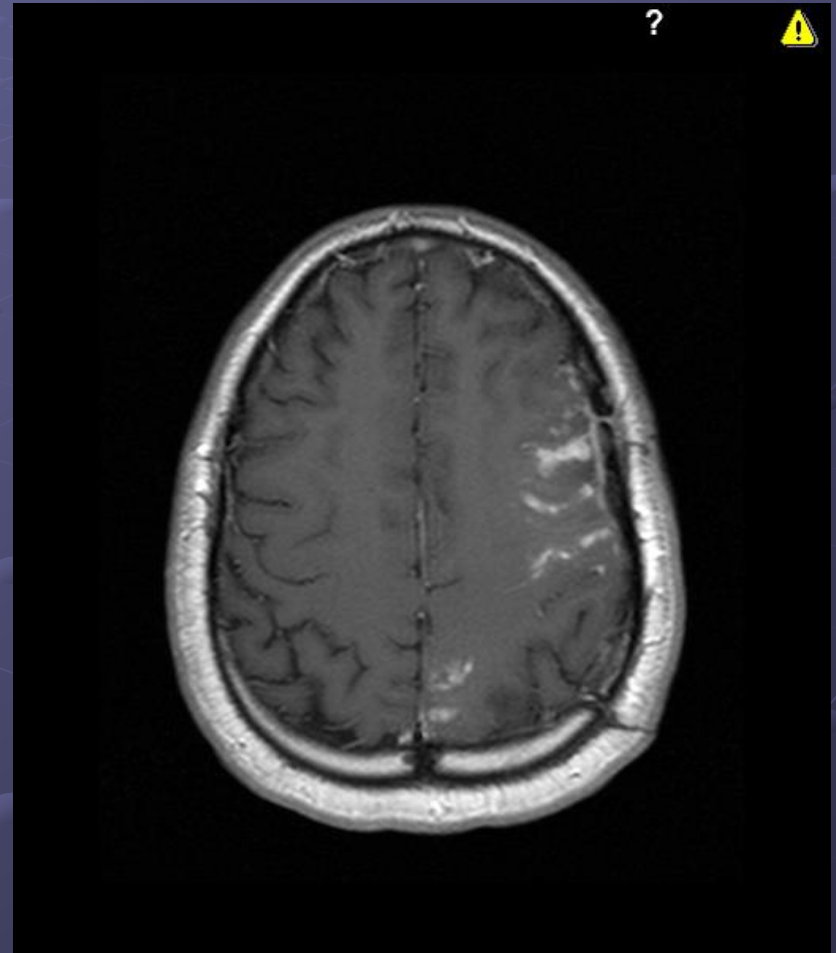

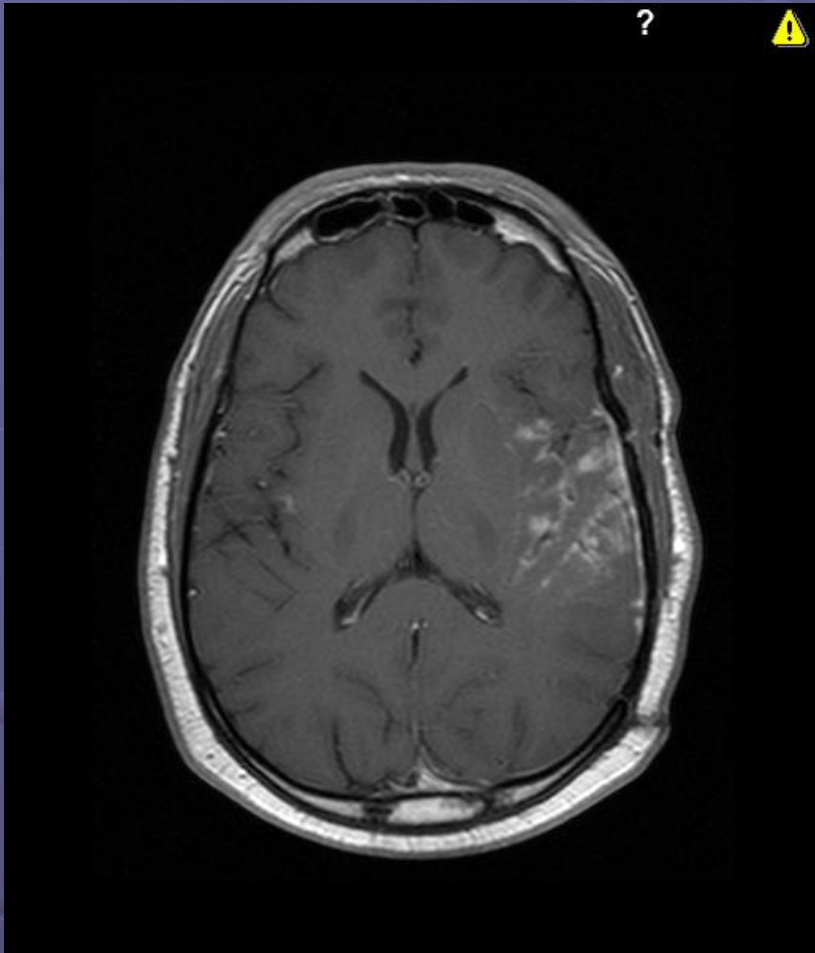

Isolated extrapyramidal Neurosarcoidosis is rare and can mimic lymphoma, vasculitis, CLIPPERS, or autoimmune GFAP astrocytopathy
